

Norton Pike's Crystolon and India sharpening stones are manufactured using a proprietary process that impregnates them with a petroleum based product that allows the lubrication used during the sharpening process to stay on the stone's surface. As a result, the metal removed from the knife and small pieces of abrasive that break off the stone become suspended in the lubricant. This prevents these materials from imbedding into the sharpening stone's surface, keeping it free cutting and making it easy to keep its surface clean.

SHARPENING STONE MATERIAL GUIDE

SHARPENING STONE MATERIAL	USE FOR
Coarse Crystolon	Fast cutting man-made sharpening stone for quick edge sharpening. Use for sharpening severely dull knives, repairing nicks, chips and damage from improper sharpening and generating new edge angles.
Medium Crystolon	Fast cutting man-made sharpening stone for quick edge sharpening. Use to sharpen dull edges quickly and upgrade the finish left by a Coarse Crystolon stone.
Fine Crystolon	Fast cutting man-made sharpening stone for quick edge sharpening. Use to sharpen slightly dulled edges and upgrade the finish left by a Coarse and Medium Crystolon stones.
Coarse India	Medium cutting rate man-made sharpening stone for fine edges. Use to sharpen dull edges quickly.
Medium India	Medium cutting rate man-made sharpening stone for fine edges. Use to sharpen dull edges.
Fine India	Medium cutting rate man-made sharpening stone used to provide a fine edge. Use to restore slightly dulled cutting edges and enhance the finish left by Medium and Coarse Crystolon and India stones.
Soft Arkansas	Natural Arkansas stone, the world's finest natural sharpening material that gives low metal removal rate and an extra fine finish. Use to hone and refine the edge developed by a Medium or Fine India stone.
Hard Arkansas	Natural Arkansas stone, the world's finest natural sharpening material that gives very low metal removal rate and an ultra fine finish. Use to impart a mirror finish to your knife's edge.
